

# Romulus/4

## 2- and 4-Port Serial PCI Cards for Power Macintosh

# Remus/2

Romulus/4 and Remus/2 are inexpensive PCI cards that can add two or four additional serial ports to your PCI Power PC Macintosh or compatible. Custom UART's with ample buffering ensure minimal loading of your Macintosh while supporting serial data rates up to 921,600 baud per port. Romulus or Remus are ideal for adding additional serial devices such as modems, MIDI, PDA's, graphic tablets, label printers, cameras, serial scanners, etc. to your PCI Macintosh. Unlike serial "switchers," Romulus and Remus ports can all run simultaneously. They are fully compatible with all PCI Macintoshes.

MegaWolf is a leader in Macintosh PCI serial expansion products, having released its "Fenris" line of expandable multiport PCI serial cards in the first quarter of 1996. Rufus, an 8 port PCI card was released in October 1996.

### Romulus/Remus Specifications:

- 2 or 4 serial ports per PCI card.
- Mac-standard RS-422 ports.
- Mac-standard Mini-DIN connectors.
- Use standard Mac serial cables
- Custom "semi-smart" UART's.
- 256 bytes buffering on all ports.
- >921,600 baud per port.
- Supports CTS, DTR/RTS, CD, external clock.
- MIDI support.
- "WolfWare" Native PowerPC drivers.
- Apple Communication Toolbox support.
- Manufactured in U.S.A.

### MegaWolf Product Support:

- 5 year hardware warranty (cables excluded).
- 1 year free software upgrades.
- Six week "no-fault" return policy.
- Unlimited technical support.
